SUBMILTER (NOV-1997) to the EMBL/GenBank/DIBJ databases.

-I- FUNCTION: IF-2, ONE OF THE ESSENITAL COMPONENTS FOR THE INITIATION
OF PROTEIN SYNTHESIS IN VITRO, PROPECTS FORMYLMETHIONYL-TRNA FROM
SPONTANEOUS HYDROLYSIS AND PROMOTES ITS BINDLING TO THE 30S
RIBOSOMAL SUBUNITS. IT IS ALSO INVOLVED IN THE HYDROLYSIS OF GTP
DURING THE FORMATION OF THE 70S RIBOSOMAL COMPLEX.

-I- SUBCELLULAR LOCATION: CYTOPLASMIC.
-I- ALTERNATIVE PRODUCTS: IT IS PROBABLE THAT BY USING ALTERNATIVE
INITIATION CODONS IN THE SAME READING FRAME, THE GENE TRANSLATES
INTO TWO ISOZYMES: ALPHA AND BETA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NP_BIND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PROSITE; PS01176; IF2; 1.
